<i>Preface</i>	vii
Acronyms	xxiii
List of Symbols and Notations	xxv
<b>Functional integrals, symmetries, and correlation functions</b>	<b>1</b>
1. Functional integrals	3
1.1 Introduction	5
1.1.1 Path integral in quantum mechanics	6
1.1.2 Functional integral in statistical physics	20
1.2 Second quantization and Green functions	27
1.2.1 Fock space	27
1.2.2 Operators in second-quantized form	32
1.2.3 Green functions	37
1.3 Coherent states	40
1.3.1 Boson coherent states	41
1.3.2 Grassmann variables	44
1.3.3 Fermion coherent states	46
1.4 Functional integral in many-particle systems	48
1.4.1 Coherent-state functional integral	48
1.4.2 Non-interacting particles	51
1.5 Perturbation theory and Feynman diagrams	55
1.5.1 Wick's theorem	56
1.5.2 Partition function and thermodynamic potential	57
1.5.3 Green functions	63
1.5.4 (Anti)symmetrized vertices	68
1.6 Generating functionals	74

1.6.1	Connected Green functions . . . . .	74
1.6.2	Effective action and 1PI vertices . . . . .	78
1.6.3	Luttinger-Ward functional and 2PI vertices . . . . .	88
1.7	Saddle-point approximation and loop expansion . . . . .	97
1.7.1	Steepest-descent and stationary-phase approximations . . . . .	97
1.7.2	Saddle-point approximation and loop expansion in field theory . . . . .	99
1.8	Perturbation theory at zero temperature . . . . .	108
1.8.1	Fermions . . . . .	109
1.8.2	Bosons . . . . .	113
1.8.3	The zero-temperature limit . . . . .	114
1.9	Quantization of the electromagnetic field . . . . .	115
1.9.1	Lagrangian and Hamiltonian formalism . . . . .	115
1.9.2	Canonical quantization in the Coulomb gauge . . . . .	119
1.9.3	Functional integral in the Coulomb gauge . . . . .	121
Appendix 1.A	Review of classical mechanics . . . . .	125
1.A.1	Lagrangian formalism . . . . .	125
1.A.2	Hamiltonian formalism . . . . .	128
1.A.3	Classical field theory . . . . .	131
Appendix 1.B	Review of quantum mechanics . . . . .	136
1.B.1	The postulates of quantum mechanics . . . . .	136
1.B.2	Quantum fields . . . . .	140
Appendix 1.C	Review of statistical physics . . . . .	141
1.C.1	Macrostates – Density operators . . . . .	141
1.C.2	Statistical entropy – Boltzmann-Gibbs distribution . . . . .	143
1.C.3	Statistical ensembles . . . . .	146
1.C.4	The classical limit . . . . .	153
1.C.5	Non-interacting quantum gases . . . . .	155
Appendix 1.D	Functionals and functional derivatives . . . . .	158
1.D.1	Grassmann variables . . . . .	159
Appendix 1.E	Gaussian integrals and Wick’s theorem . . . . .	160
1.E.1	Real variables . . . . .	160
1.E.2	Complex variables . . . . .	161
1.E.3	Grassmannian integrals . . . . .	162
1.E.4	Gaussian functional integrals . . . . .	165
Appendix 1.F	Matsubara frequency sums . . . . .	166
Appendix 1.G	Perturbation theory in the operator formalism . . . . .	171
1.G.1	Zero-temperature formalism . . . . .	171
1.G.2	Finite-temperature formalism . . . . .	175
	Bibliography . . . . .	177
2.	Symmetries . . . . .	181

## Contents

xv

2.1	Symmetries, invariances and conservation laws . . . . .	182
2.1.1	Symmetry transformations in quantum mechanics . . . . .	182
2.1.2	Wigner's theorem – Group structure . . . . .	182
2.1.3	Continuous symmetries . . . . .	183
2.1.4	Transformation of observables . . . . .	184
2.1.5	Invariance – Conservation laws . . . . .	185
2.2	Examples of symmetry transformations . . . . .	187
2.2.1	Parity . . . . .	187
2.2.2	Space translation . . . . .	189
2.2.3	Space rotation . . . . .	190
2.2.4	Time translation . . . . .	191
2.2.5	Galilean transformation . . . . .	192
2.2.6	Time reversal . . . . .	194
2.2.7	U(1) symmetry and gauge transformation . . . . .	199
2.3	Symmetries and functional integrals . . . . .	200
2.3.1	Classical field theory – Noether's theorem . . . . .	200
2.3.2	Ward identities . . . . .	205
2.3.3	Ward identities for the 1PI vertices . . . . .	208
2.3.4	Ward identities for the 2PI vertices . . . . .	211
Appendix 2.A	Ward identities in a fermion system . . . . .	214
2.A.1	U(1) transformation . . . . .	215
2.A.2	Spin rotation . . . . .	215
2.A.3	Galilean transformation . . . . .	216
	Bibliography . . . . .	217
3.	Correlation and response functions . . . . .	221
3.1	Linear response theory . . . . .	222
3.1.1	Kubo's formula . . . . .	223
3.1.2	Periodic perturbations . . . . .	225
3.2	Properties of correlation functions . . . . .	225
3.2.1	Symmetry properties . . . . .	225
3.2.2	Dissipation . . . . .	227
3.2.3	Spectral representation . . . . .	229
3.2.4	Kramers-Kronig relations and causality . . . . .	233
3.2.5	Fluctuation-dissipation theorem . . . . .	234
3.2.6	Sum rules and high-frequency behavior . . . . .	234
3.2.7	Imaginary-time correlation function . . . . .	235
3.3	Density-density response function . . . . .	242
3.3.1	Symmetry properties . . . . .	243
3.3.2	High-frequency behavior and $f$ -sum rule . . . . .	243
3.3.3	Compressibility . . . . .	243

3.4	Electromagnetic response function . . . . .	245
3.4.1	Longitudinal dielectric function . . . . .	245
3.4.2	Transverse dielectric function . . . . .	251
3.4.3	Linear response to external fields . . . . .	254
3.4.4	Conductivity . . . . .	257
3.4.5	Superconductors . . . . .	263
3.5	One-particle Green function . . . . .	266
3.5.1	Spectral function . . . . .	267
3.5.2	Analyticity properties . . . . .	268
3.5.3	Sum rules and high-energy behavior . . . . .	268
3.5.4	Symmetry properties . . . . .	269
3.5.5	Relation to observables . . . . .	270
3.6	Spontaneous symmetry breaking and Goldstone's theorem . . . . .	273
3.6.1	The Bogoliubov inequality . . . . .	273
3.6.2	Spontaneous symmetry breaking . . . . .	274
3.6.3	Goldstone's theorem . . . . .	279
3.6.4	Mermin-Wagner theorem . . . . .	284
3.6.5	Quantum disorder at zero temperature . . . . .	285
	Bibliography . . . . .	288
	<b>Quantum many-body systems (I)</b> . . . . .	<b>291</b>
4.	Fermi-liquid theory . . . . .	293
4.1	The quasi-particle concept . . . . .	294
4.1.1	The ideal Fermi gas . . . . .	294
4.1.2	The interacting Fermi liquid . . . . .	295
4.1.3	Landau energy functional $E[n]$ . . . . .	297
4.1.4	Stability of the ground state . . . . .	300
4.1.5	Effective mass . . . . .	300
4.2	Thermodynamics . . . . .	302
4.2.1	Specific heat . . . . .	302
4.2.2	Compressibility . . . . .	302
4.2.3	Spin susceptibility . . . . .	303
4.3	Non-equilibrium properties . . . . .	304
4.3.1	Kinetic equation . . . . .	304
4.3.2	Conservation laws . . . . .	305
4.3.3	Collective modes . . . . .	306
4.3.4	Response functions . . . . .	311
4.3.5	Multi-pair excitations . . . . .	316
4.4	Microscopic basis of Fermi-liquid theory . . . . .	317

<i>Contents</i>	xvii
4.4.1 Quasi-particles . . . . .	318
4.4.2 Thermodynamic potential $\Omega[n]$ . . . . .	325
4.4.3 Quantum Boltzmann equation . . . . .	330
4.4.4 Ward identities for the Fermi liquid . . . . .	332
4.4.5 Response to external fields . . . . .	334
4.4.6 Luttinger theorem . . . . .	337
4.5 Fermi liquids in low dimensions . . . . .	339
Appendix 4.A Second-order self-energy . . . . .	339
Bibliography	342
5. The electron gas	345
5.1 The jellium model . . . . .	346
5.2 The random-phase approximation . . . . .	347
5.2.1 Dielectric function and density-density response function . . . . .	347
5.2.2 Mean-field character of the RPA . . . . .	349
5.2.3 The RPA in the functional integral formalism . . . . .	350
5.3 Physical properties of the RPA . . . . .	353
5.3.1 The Lindhard function . . . . .	353
5.3.2 Density fluctuation spectrum . . . . .	356
5.3.3 Screening . . . . .	358
5.3.4 Ground state energy and compressibility . . . . .	360
5.4 One-particle properties . . . . .	363
5.4.1 Hartree-Fock theory . . . . .	363
5.4.2 RPA self-energy . . . . .	364
5.5 Beyond the RPA . . . . .	368
5.6 Wigner crystallization . . . . .	369
Bibliography	371
6. Magnetism in lattice fermion systems	375
6.1 The Hubbard model . . . . .	376
6.1.1 Symmetries . . . . .	376
6.1.2 The non-interacting limit $U = 0$ . . . . .	377
6.1.3 The local limit $t = 0$ . . . . .	379
6.1.4 Ground states of the Hubbard model . . . . .	380
6.2 Charge and magnetic instabilities . . . . .	381
6.2.1 Non-interacting susceptibilities . . . . .	381
6.2.2 Susceptibilities in the RPA . . . . .	382
6.3 Stoner's theory of ferromagnetism . . . . .	385
6.3.1 Hartree-Fock theory . . . . .	385
6.3.2 Charge and spin collective modes . . . . .	387

6.3.3	Functional integral formalism . . . . .	390
6.4	Slater's theory of antiferromagnetism . . . . .	395
6.4.1	Hartree-Fock theory . . . . .	397
6.4.2	Transverse spin-wave modes . . . . .	398
6.4.3	Beyond spin waves: the quantum nonlinear $\sigma$ model . . . . .	400
6.4.4	Large- $U$ limit of the half-filled Hubbard model . . . . .	408
6.4.5	Two-particle self-consistent theory . . . . .	410
Appendix 6.A	Hartree-Fock correlation functions . . . . .	419
6.A.1	Ferromagnet . . . . .	419
6.A.2	Antiferromagnet . . . . .	420
Appendix 6.B	SU(2) gauge fields . . . . .	422
	Bibliography . . . . .	423
7.	Superfluidity and superconductivity . . . . .	429
7.1	Superfluidity and long-range current-current correlations . . . . .	430
7.2	Spontaneous U(1) symmetry breaking and superfluidity . . . . .	434
7.2.1	Off-diagonal long-range order and spontaneous symmetry breaking . . . . .	434
7.2.2	Quantum hydrodynamics . . . . .	437
7.2.3	Finite temperature – Two-fluid hydrodynamics . . . . .	443
7.2.4	Superconductors – Anderson-Higgs mechanism . . . . .	448
7.3	Gross-Pitaevskii theory . . . . .	453
7.3.1	Statics and dynamics of a uniform condensate . . . . .	454
7.3.2	Vortex . . . . .	456
7.3.3	Soliton . . . . .	458
7.4	Bogoliubov theory . . . . .	459
7.4.1	Mean-field theory . . . . .	461
7.4.2	Lee-Huang-Yang correction . . . . .	462
7.4.3	Transition temperature of the dilute Bose gas . . . . .	465
7.4.4	Universal thermodynamics of the dilute Bose gas . . . . .	466
7.4.5	Two-body contact . . . . .	470
7.5	BCS mean-field theory of superconductivity . . . . .	474
7.5.1	Cooper instability and superconducting transition . . . . .	475
7.5.2	Mean-field theory . . . . .	476
7.5.3	Ginzburg-Landau theory . . . . .	484
7.6	Collective modes in superconductors . . . . .	492
7.6.1	BCS correlation functions . . . . .	495
7.6.2	Anderson-Bogoliubov mode . . . . .	496
7.6.3	Electrodynamics . . . . .	500
7.6.4	Higgs amplitude mode . . . . .	504
7.7	BCS-BEC crossover . . . . .	505
7.7.1	Mean-field theory . . . . .	505

*Contents*

xix

7.7.2	Fluctuations: the Nozières-Schmitt-Rink approach . . . . .	511
7.7.3	The dilute Fermi gas near a Feshbach resonance . . . . .	515
Appendix 7.A	Elements of scattering theory . . . . .	518
7.A.1	Lippmann-Schwinger equation . . . . .	519
7.A.2	Central potential . . . . .	520
7.A.3	Low-energy collisions – scattering length . . . . .	522
7.A.4	$T$ matrix and many-body formalism . . . . .	524
	Bibliography . . . . .	527
8.	Quantum magnetism . . . . .	535
8.1	The Heisenberg model . . . . .	536
8.1.1	The ferromagnet . . . . .	537
8.1.2	The antiferromagnet . . . . .	539
8.2	Random-phase approximation . . . . .	539
8.2.1	Classical dynamics . . . . .	539
8.2.2	Spin susceptibilities in the RPA . . . . .	540
8.3	Spin waves: Holstein-Primakoff bosons . . . . .	542
8.3.1	The ferromagnet . . . . .	543
8.3.2	The antiferromagnet . . . . .	544
8.4	Spin-coherent-state functional integral . . . . .	547
8.4.1	Berry phase . . . . .	547
8.4.2	Functional integral . . . . .	551
8.4.3	Quantum nonlinear $\sigma$ model . . . . .	556
8.5	Schwinger-boson mean-field theory . . . . .	561
8.5.1	Schwinger bosons . . . . .	561
8.5.2	Mean-field theory of the antiferromagnetic Heisenberg model . . . . .	562
8.5.3	$SU(\mathcal{N})$ Heisenberg model . . . . .	567
Appendix 8.A	A single spin in an external field . . . . .	568
8.A.1	Free energy . . . . .	568
8.A.2	Spin-spin correlation function . . . . .	568
Appendix 8.B	Spin-coherent states . . . . .	569
	Bibliography . . . . .	571
9.	Baym-Kadanoff formalism . . . . .	575
9.1	Conserving approximations . . . . .	576
9.1.1	Symmetries, conservation laws and Ward identities . . . . .	576
9.1.2	Conserving approximations from generating functionals . . . . .	579
9.1.3	Perturbative conserving approximations . . . . .	582
9.1.4	Limitations of the Baym-Kadanoff approach . . . . .	586
9.1.5	Thermodynamic self-consistency . . . . .	591

9.2	Mott transition and dynamical mean-field theory . . . . .	591
9.2.1	Brinkman-Rice theory of the Mott transition . . . . .	592
9.2.2	Dynamical mean-field theory . . . . .	593
9.3	Self-energy functional theory . . . . .	600
9.3.1	Variational cluster approximation . . . . .	603
9.3.2	Dynamical mean-field theory recovered . . . . .	604
9.3.3	Phase diagram of the half-filled two-dimensional Hubbard model . .	606
Appendix 9.A	Brinkman-Rice theory: Gutzwiller approximation . . . . .	608
9.A.1	Kotliar-Ruckenstein slave bosons . . . . .	612
	Bibliography	614
	<i>Index</i>	618

## Contents of volume II

### The renormalization group

10. Renormalization group and critical phenomena
11. The non-perturbative functional renormalization group

### Quantum many-body systems (II)

12. Quantum phase transitions
13. Interacting bosons
14. The Bose-Hubbard model and the superfluid–Mott-insulator transition
15. Interacting fermions and renormalization group
