<i>Preface</i>	vii
Acronyms	xvii
List of Symbols and Notations	xix
<b>Functional integrals, symmetries, and correlation functions</b>	<b>1</b>
1. Functional integrals	3
1.1 Introduction . . . . .	5
1.2 Second quantization and Green functions . . . . .	27
1.3 Coherent states . . . . .	40
1.4 Functional integral in many-particle systems . . . . .	48
1.5 Perturbation theory and Feynman diagrams . . . . .	55
1.6 Generating functionals . . . . .	74
1.7 Saddle-point approximation and loop expansion . . . . .	97
1.8 Perturbation theory at zero temperature . . . . .	108
1.9 Quantization of the electromagnetic field . . . . .	115
Appendix 1.A Review of classical mechanics . . . . .	125
Appendix 1.B Review of quantum mechanics . . . . .	136
Appendix 1.C Review of statistical physics . . . . .	141
Appendix 1.D Functionals and functional derivatives . . . . .	158
Appendix 1.E Gaussian integrals and Wick's theorem . . . . .	160
Appendix 1.F Matsubara frequency sums . . . . .	166
Appendix 1.G Perturbation theory in the operator formalism . . . . .	171
Bibliography	177
2. Symmetries	181

2.1	Symmetries, invariances and conservation laws . . . . .	182
2.2	Examples of symmetry transformations . . . . .	187
2.3	Symmetries and functional integrals . . . . .	200
	Appendix 2.A Ward identities in a fermion system . . . . .	214
	Bibliography . . . . .	217
3.	Correlation and response functions . . . . .	221
3.1	Linear response theory . . . . .	222
3.2	Properties of correlation functions . . . . .	225
3.3	Density-density response function . . . . .	242
3.4	Electromagnetic response function . . . . .	245
3.5	One-particle Green function . . . . .	266
3.6	Spontaneous symmetry breaking and Goldstone's theorem . . . . .	273
	Bibliography . . . . .	288
	<b>Quantum many-body systems (I)</b> . . . . .	<b>291</b>
4.	Fermi-liquid theory . . . . .	293
4.1	The quasi-particle concept . . . . .	294
4.2	Thermodynamics . . . . .	302
4.3	Non-equilibrium properties . . . . .	304
4.4	Microscopic basis of Fermi-liquid theory . . . . .	317
4.5	Fermi liquids in low dimensions . . . . .	339
	Appendix 4.A Second-order self-energy . . . . .	339
	Bibliography . . . . .	342
5.	The electron gas . . . . .	345
5.1	The jellium model . . . . .	346
5.2	The random-phase approximation . . . . .	347
5.3	Physical properties of the RPA . . . . .	353
5.4	One-particle properties . . . . .	363
5.5	Beyond the RPA . . . . .	368
5.6	Wigner crystallization . . . . .	369
	Bibliography . . . . .	371
6.	Magnetism in lattice fermion systems . . . . .	375
6.1	The Hubbard model . . . . .	376

<i>Contents</i>	xv
6.2 Charge and magnetic instabilities . . . . .	381
6.3 Stoner's theory of ferromagnetism . . . . .	385
6.4 Slater's theory of antiferromagnetism . . . . .	395
Appendix 6.A Hartree-Fock correlation functions . . . . .	419
Appendix 6.B SU(2) gauge fields . . . . .	422
Bibliography	423
7. Superfluidity and superconductivity	429
7.1 Superfluidity and long-range current-current correlations . . . . .	430
7.2 Spontaneous U(1) symmetry breaking and superfluidity . . . . .	434
7.3 Gross-Pitaevskii theory . . . . .	453
7.4 Bogoliubov theory . . . . .	459
7.5 BCS mean-field theory of superconductivity . . . . .	474
7.6 Collective modes in superconductors . . . . .	492
7.7 BCS-BEC crossover . . . . .	505
Appendix 7.A Elements of scattering theory . . . . .	518
Bibliography	527
8. Quantum magnetism	535
8.1 The Heisenberg model . . . . .	536
8.2 Random-phase approximation . . . . .	539
8.3 Spin waves: Holstein-Primakoff bosons . . . . .	542
8.4 Spin-coherent-state functional integral . . . . .	547
8.5 Schwinger-boson mean-field theory . . . . .	561
Appendix 8.A A single spin in an external field . . . . .	568
Appendix 8.B Spin-coherent states . . . . .	569
Bibliography	571
9. Baym-Kadanoff formalism	575
9.1 Conserving approximations . . . . .	576
9.2 Mott transition and dynamical mean-field theory . . . . .	591
9.3 Self-energy functional theory . . . . .	600
Appendix 9.A Brinkman-Rice theory: Gutzwiller approximation . . . . .	608
Bibliography	614
<i>Index</i>	618

## Contents of volume II

### **The renormalization group**

- 10. Renormalization group and critical phenomena
- 11. The non-perturbative functional renormalization group

### **Quantum many-body systems (II)**

- 12. Quantum phase transitions
- 13. Interacting bosons
- 14. The Bose-Hubbard model and the superfluid–Mott-insulator transition
- 15. Interacting fermions and renormalization group
